

## Embedded ActiveMQ Broker using Spring's @Configuration

by Benny Bottema - Monday, June 13, 2016

<http://www.bennybottema.com/2016/06/13/embedded-activemq-broker-using-springs-configuration/>

Quick note on how to configure an embedded ActiveMQ server using Spring @Configuration.

@Configuration

```
public class AppConfig {  
  
    public static final String BROKER_URL = "tcp://localhost:6060";  
  
    @Bean  
    public BrokerService broker() throws Exception {  
        BrokerService brokerService = new BrokerService();  
        brokerService.addConnector(new URI(BROKER_URL));  
        brokerService.setPersistent(false);  
        return brokerService;  
    }  
}
```
