

Simple Java Mail 1.9 is now available in Maven Central

by Benny Bottema - Saturday, August 13, 2011

<http://www.bennybottema.com/2011/08/13/simple-java-mail-1-9-is-now-available-in-maven-central/>

I hadn't gotten around to putting [Simple Java Mail](#) into Maven Central due to the complexities of going through Sonatype first. But now it is done: Simple Java Mail v1.9 now [resides](#) in Maven Central and can be included in your project using the following dependency:

```
org.codemonkey.simplejavamail
simple-java-mail
1.9.1
```

Speaking of which, v1.9 was recently released with the following changes (in addition to Maven support, making it 1.9.1):

- added support for JavaMail's reply-to address
- made port optional as to support port defaulting based on protocol
- added transport strategy default in the createSession method (solving potential NullPointerException)
- tightened up thrown exceptions (MailException? instead of RuntimeException?)
- added and fixed JavaDoc

Here's a small example of the reply-to addition:

```
Email email = new Email(); email.setFromAddress("lollypop",
"lol.pop@somemail.com"); email.setReplyToAddress("lollypop's mom",
"lol.mom@somemail.com"); //
```
