Very Simple Java Mail is no more. Long live Simple Java Mail!

Vesijama has been renamed to Simple Java Mail and the name Vesijama has been degraded to a working title. The reason: the title didn't reflect the intention nor the function of the project and people complained about the outlandish name.

And so the project moved altogether to a new space at GitHub: [Simple Java Mail](#).

For now the library jars have been renamed manually, but in the future the name will be incorporated in the sourcecode itself as well.

Happy mailing!
